

400A Distribution Box Standard

Article Overview

A 400A distribution box is a high-capacity electrical unit designed to safely distribute up to 400 amps of current, typically built to comply with standards like EN 61439-4 and equipped with multiple protection features.

Overview

A 400A distribution box is used in industrial, commercial, and large-scale event applications to manage high electrical loads safely. These units are designed to handle up to 400 amps of current and are suitable for construction sites, manufacturing facilities, and temporary power setups at events. They are often portable or modular, allowing flexibility in deployment.

Construction and Materials

- **Housing:** Can be made from solid rubber for impact and shock resistance or steel frames for durability.
- **Components:** High-quality components from brands like Siemens, Bremas, and Eurokontakt are commonly used.
- **Sockets and Outlets:** Typically include multiple flush-mounted sockets (e.g., 32A, 63A, 16A) with individual circuit breakers and residual current devices (RCDs) for safety.
- **Customization:** Many 400A boxes are bespoke, allowing configuration of input/output connections, metering, and remote monitoring.
