

8-port PoE power supply switch

Article Overview

For powering an 8-port PoE switch, you can use either an active 8-port PoE injector with a 56V 120W supply or a compatible PoE switch with built-in power supply supporting IEEE 802.3af/at standards.

Active 8-Port PoE Injector

An active PoE injector like the PoE Texas AT-8 provides up to 30W per port with a total power budget of 120W. It uses Mode A power delivery (pins 1,2- / 3,6+) and intelligently negotiates with connected devices, ensuring non-PoE devices are protected from accidental power delivery. This type of injector is ideal for adding PoE capability to a non-PoE switch without replacing existing infrastructure. It supports Gigabit speeds and includes self-resetting fuses and overload protection for reliable operation .

Passive 8-Port PoE Injector

For simpler setups, a passive 8-port PoE injector can supply a fixed voltage (e.g., 48V or 24V) to all connected devices. For example, the PoE Texas WS-GPOES-8-7 comes with a 24V 60W power supply and can power up to 7 devices. Passive injectors are straightforward but do not negotiate power, so care must be taken to avoid connecting non-PoE devices .
