

Can a 360 router connect to fiber optic internet

Overview

Yes, you can use your own router with fiber internet, as long as it has a Gigabit Ethernet WAN port to connect to your ISP's Optical Network Terminal. Upgrading to a Wi-Fi 6 or 6E router helps you get the full benefit of symmetrical fiber speeds. A fiber-optic connection is the best choice for fast home internet as it has a number of advantages compared to traditional copper cables, such as faster speeds and less interference. Many major ISPs, such as Verizon and Xfinity, offer fiber connections directly to your door, known as FttP or Fiber. However, setting up a fiber optic connection to your router can seem daunting if you're unfamiliar with the process. Why Use Fiber Optic Internet?

Before diving into the setup, let's quickly. When switching to fiber internet, many users wonder if they're able to use their own router instead of the one provided by their internet service provider (ISP). It requires a compatible fiber optic modem or ONT. This guide will break down everything you.
