

Concealed wiring box distribution box

Article Overview

A concealed distribution box is a flush-mounted electrical enclosure designed to safely house circuit breakers and wiring while blending seamlessly into walls for a clean, tamper-free finish.

Key Features

Concealed design: These boxes are installed recessed into walls or ceilings, leaving only the front panel visible, which enhances interior aesthetics and prevents accidental contact with live components . **Material and durability:** Commonly made from powder-coated steel, cold-rolled steel, stainless steel, or flame-retardant ABS plastic, providing corrosion resistance, fire safety, and long-term durability . **IP rating:** Depending on the environment, concealed boxes offer protection from dust and moisture, typically ranging from IP40 for dry indoor areas to IP54/IP65 for damp or industrial settings . **DIN-rail compatibility:** Most concealed boxes include DIN rails for easy mounting of MCBs, RCDs, and other modular components, allowing organized wiring and future upgrades without cutting wires . **Front access panel:** Lockable or push-latch doors provide secure access for maintenance while keeping the internal wiring hidden . **Pre-punched knockouts:** Facilitate conduit connections and simplify wiring installation . **Size and capacity:** Available in various sizes (e.g., 10×14 inches, 12-way, or single-row 12-bit configurations) to accommodate multiple circuits and modules .

Applications

- Residential: Houses, apartments, and home automation systems
