

# Cost of splicing 96-core optical fiber cable

## Article Overview

Splicing a 96-core optical fiber cable typically costs between \$3,000 and \$8,000, depending on labor, equipment, and site conditions.

### Per-Splice Cost

Fusion splicing, the most common method for long-term installations, generally costs \$50-\$150 per splice for standard single-mode fibers, with higher-end rates for ribbon fibers or specialty splices . A 96-core cable requires 96 splices per closure, so the base labor cost alone can range from \$4,800 to \$14,400 at standard per-splice rates. However, contractors often offer volume discounts for high-fiber-count projects, which can reduce the per-splice cost to \$30-\$60 for large cables .

### Additional Cost Factors

- **Site Conditions:** Aerial splicing in open areas is cheaper than underground vault work or confined spaces, which may require additional safety measures and crew members .
- **Equipment and Testing:** Fusion splicers, OTDR testing, and attenuation measurement are typically included in labor costs, but high-end equipment or advanced testing can increase the total .
- **Materials:** Splice trays, closures, protective enclosures, and connectors are usually extra and can add several hundred dollars per closure .
- **Labor Hours:** Skilled technicians may charge \$50-\$180 per hour, and complex inst...
