

# Double-on Double-off Distribution Box

## Article Overview

A Double-on/Double-off Distribution Box is an electrical enclosure that allows independent control of two circuits using dual push-button switches, providing safe and organized power distribution.

### Overview

A Double-on/Double-off Distribution Box is a type of DB (distribution) box designed to manage and distribute electrical power safely to multiple circuits. It typically houses circuit breakers, fuses, bus bars, and control switches, allowing two separate circuits to be independently turned on or off using double push-button mechanisms (one button for ON, one for OFF) for each circuit. This setup is common in industrial, commercial, and residential applications where multiple devices or systems need controlled power distribution.

### Components

Key components of a double-on/double-off distribution box include:

- **Double Push-Button Switches:** Each circuit has a pair of buttons—green for ON (Normally Open, NO) and red for OFF (Normally Closed, NC)—allowing quick and visible control of the circuit.
- **Circuit Breakers or Fuses:** Protect circuits from overloads and short circuits, ensuring safety.
- **Bus Bars:** Conduct electricity from the main supply to individual circuits.
- **Enclosure:** Made from durable materials like polycarbonate, ASA, or powder-coated steel.
