

Fiber optic cable reel direction

Overview

Store reels on solid ground to avoid flanges from sinking into ground, do not lay on its side. Only roll reel in direction of arrow on flange. Do not use forklift to slide cable reel. Proof duct with a mandrel that is 80% full of duct. Determine minimum bend diameter from specification sheet of. The cable reel must be secured to a solid surface using at least (4) M8 or 5/16" bolts, either from the top or bottom. The figure 8 puts a half twist in on one side of the 8 and takes it out on the other m is a common size. Pull slowly and carefully lay the cable in the figure 8 pattern to prevent. The fiber cable is wrapped on the reel at the factory in tight symmetrical wraps around the drum which is greater than the minimum bending radius (MBR) rating of the fiber cable.
