

# Fiber optic cable service is not available in winter

## Overview

Summary : Winter weather generally has minimal impact on fiber optic cables since they transmit data through light rather than electricity, making them resistant to temperature-related signal loss. Fiber optic internet is known for delivering blazing high-speed connectivity through strands of glass or plastic that transmit data using light. But what do you do when fiber optic internet isn't available or practical due to location, infrastructure limitations, or common fiber internet issues?

The short answer: Fiber handles weather better than copper or satellite because it carries data as pulses of light instead of electrical signals. Ruggedized parts help. Enter your address to check fiber internet availability and see which providers, speeds, and plans are available at your address. Don't see your town?

Check additional locations here. So you can binge, game and work at the speed you need. No unexpected price hikes, hidden fees, or equipment charges.
