

Fiber optic cables can be directly connected to the ODN

Overview

The ODN provides the physical connection between the ONU and OLT over a distance of 20 km or more. Between the central OLT and the distributed ONUs, the network relies solely on passive optical splitters and fiber optic cables. This passivity translates directly into three. An Optical Distribution Network (ODN) is the passive fiber infrastructure that connects the Optical Line Terminal (OLT) in the central office to the Optical Network Unit (ONU/ONT) at the subscriber side. Unlike an Active Optical Network (AON), where multiple customers are linked to a single transceiver through. Explore ODN and Quick ODN Architectures, Including Fiber Optic Cable, PLC Splitters, and Fiber Distribution Boxes for Efficient FTTH Network Deployment 1.
