

How many meters of outdoor optical cable are in a whole reel

Article Overview

A standard outdoor optical fiber cable reel typically contains between 1000 and 1500 meters of cable, though smaller reels may hold 100-600 meters depending on cable diameter and type.

Typical Reel Lengths

- Standard reels for outdoor fiber optic cables, such as FTTH drop cables or armored single-mode cables, are commonly 1000 meters per reel .
- Smaller reels for patchcords or thinner cables may hold 100-600 meters, depending on the cable diameter (e.g., 3.0mm or 5.0mm cables), .
- Large industrial reels can accommodate up to 1500 meters, especially for field-deployable or heavy-duty outdoor installations .

Factors Affecting Reel Capacity

- Cable Diameter: Thicker armored cables occupy more space, reducing the total length per reel.
- Reel Design: Portable reels with ergonomic handles or industrial metal frames may have different maximum capacities.
- Application: Long-distance outdoor installations often use 1000-1500 meter reels, while short-term or patching applications use smaller reels.
