

How to connect bare fiber optic cable to a router

Article Overview

You cannot connect bare fiber optic cables directly to a standard router; you must use an Optical Network Terminal (ONT) to convert the optical signal into an electrical signal for your router.

Required Equipment

- Optical Network Terminal (ONT): Converts light signals from the fiber into Ethernet signals compatible with your router .
- Fiber optic cable: Typically single-mode with SC/APC or SC/UPC connectors .
- Router: Must have a WAN or Ethernet port to receive the signal from the ONT .
- Ethernet cable: To connect the ONT to the router .
- Power adapters: For both the ONT and router .

Step-by-Step Connection Process

- Install the ONT
- Locate the fiber optic wall outlet where your ISP's fiber line enters your home .
- Connect the fiber optic cable to the ONT's optical port. Handle the fiber by its plastic housing and avoid touching the glass tip to prevent damage .
- Remove protective dust caps from both the fiber connector and ONT port before connecting .
- Align the connector with the port's key or tab and push until it clicks securely .
- Power on the ONT and wait for the status lights to stabilize, indicating a successful connection
