

How to connect the wires in a photovoltaic combiner box

Article Overview

To wire a PV combiner box, connect each solar panel string's positive and negative wires to the corresponding input terminals with fuses or breakers, then combine them via busbars and connect the output to the inverter, ensuring proper grounding and secure connections.

Step 1: Safety First

- Disconnect power: Ensure the PV system is completely de-energized before starting any wiring work .
- Use PPE: Wear insulated gloves, safety glasses, and use tools rated for DC voltage .
- Check codes: Follow local electrical codes (NEC, IEC) and obtain necessary permits .

Step 2: Prepare the Combiner Box

- Mount the combiner box in a sturdy, weatherproof location, ideally near the solar array to minimize voltage drop .
- Ensure the enclosure is IP65 or higher for outdoor installations .
- Identify input terminals (for each string) and output terminals (to inverter) inside the box .

Step 3: Connect Solar Panel Strings

- Route wires: Run positive (+) and negative (-) cables from each string into the co...
