

How to cover the electrical distribution box in the corridor

Article Overview

You can cover a corridor electrical distribution box using decorative panels, cabinets, or sliding doors while ensuring safety and accessibility.

Safety First

Before attempting any cover installation, ensure the power to the circuit is turned off at the main breaker and verify with a non-contact voltage tester to confirm zero voltage inside the box . Active boxes must remain accessible for maintenance, so permanent concealment is only suitable for de-energized or abandoned boxes . Always follow local electrical codes and clearance requirements to prevent hazards.

Decorative Cover Options

- **Wall Panels or Hinged Covers:** Use a decorative wall panel or hinged cover that is at least 10 cm larger than the box to allow easy access and ventilation . Flip-top or swing-open designs provide convenience for quick access.
- **Sliding Doors or Cabinet Enclosures:** Install a sliding door or small cabinet around the box. This can double as storage for keys or small items while hiding the electrical components .
- **False Wall or Artwork:** Create a false wall or frame a piece of artwork over the box. Ensure the panel can be removed or opened without tools for emergency access .
- **Camouflage with Plants or Furniture:** Strategically place tall plants or furniture around the box to obscure it visually while leaving sufficient clearance for maintenance
