

Inquiry about 24-core figure-eight optical fiber cable

Article Overview

A 24-core figure-eight optical fiber cable is a self-supporting outdoor cable designed for aerial installation, offering high tensile strength, water resistance, and versatile fiber options.

Structure and Design

The 24-core figure-eight cable features a unique figure-8 profile, where a steel stranded wire serves as the self-supporting member, providing robust tensile strength for aerial deployment and installation (). The fibers, either single-mode (G.652D, G.657A1/A2) or multimode (OM1-OM4), are housed in loose tubes made of high-modulus plastic, which are stranded around a metallic central strength member. Water-blocking materials are distributed within the interstices, and a PE sheath completes the figure-8 structure, ensuring environmental protection ().

Mechanical and Environmental Performance

- **Tensile Strength:** Can withstand short-term pulling forces up to 5000N, ensuring durability during installation ().
- **Crush and Impact Resistance:** Corrugated steel tape armor and PE outer sheath provide protection against crushing and mechanical impacts, including gunshot resistance ().
- **Temperature Range:** Operates reliably from -40°C to +70°C, suitable for diverse climates ()....
