

Introduction and Price of Aluminum Optical Cable Brackets

Article Overview

Aluminum optical cable brackets are durable, corrosion-resistant supports designed for secure installation of fiber optic cables on poles and walls.

Introduction

Aluminum optical cable brackets, often referred to as UPB (Universal Pole Brackets), are primarily used for suspending, tensioning, or fixing fiber optic cables in outdoor environments. They are made from high-strength aluminum alloy, which is passivated to resist corrosion and ensure long-term durability. These brackets can support 1 to 3 parallel cables, multiple drop wires, and can serve as a base for cross-arm installations. They are compatible with wooden, metal, or concrete poles, and can be fixed using stainless steel bands or bolts. The design of UPB brackets provides multiple clamping points, allowing secure attachment without slippage or breakage. They are widely used in FTTH (Fiber to the Home) installations, ADSS fiber lines, and other optical cable networks. The brackets are lightweight yet strong, offering high load-bearing capacity while being easy to install and maintain.

Features

- Material: High-strength aluminum alloy, corrosion-resistant
- Installation: Stainless steel bands (20 mm) or bolts (14–16 mm)
- Applications: Fiber optic drop wires, suspension clamps, cross-arm mounting
- Durability: Resistant to harsh weather, chemical exposure, and marine environment...
