

Kone elevator light curtain interfered with by signal amplifier

Overview

Strong ambient light from sunlight can interfere with the infrared signals, causing the sensors to malfunction. Installing light shields or adjusting the lighting can help. In modern elevator door systems, the elevator light curtain has become a critical safety protection device. It uses infrared beams to detect obstructions in the doorway, ensuring doors do not close when people or objects are in the way. These ingenious sensor-based devices are constantly on the lookout. Before committing to any construction decisions, please contact your local KONE representative to verify the configuration. Easy way to download and share all your project files.
