

Latvian manufacturer produces 24-core butterfly-shaped drop cable

Article Overview

Currently, there is no publicly documented 24-core butterfly-shaped drop cable from a Latvian manufacturer, though butterfly drop cables are widely used in FTTH networks.

Overview of Butterfly Drop Cables

Butterfly-shaped drop cables are designed for aerial and duct installations in FTTH and telecom networks. They typically feature a central optical fiber unit flanked by parallel strength members, often with an additional steel wire for tensile support. The outer sheath is usually LSZH (Low Smoke Zero Halogen), providing flame retardancy and environmental durability . These cables are valued for their self-supporting structure, which allows installation without additional messenger wires.

Typical Configurations

- Commonly available in 1-core, 2-core, and 4-core configurations .
- Compatible with G657A1, A2, and B3 fibers, supporting standard fiber diameters of 125 μm with cladding diameters of 250 μm or 900 μm .
- Designed to withstand tensile loads, bending, and environmental stress, ensuring minimal signal loss and high durability .
