

Mexican Wiring Cable Trays

Article Overview

Cable tray systems in Mexico are widely used for organized, safe, and scalable electrical wiring in industrial, commercial, and infrastructure projects, with options including ladder, mesh, and solid-bottom trays made from materials like galvanized steel, stainless steel, and fiberglass.

Types of Cable Trays

Ladder-Type Trays: These are commonly used in industrial and commercial environments for heavy-duty cabling. They provide excellent ventilation and support for large bundles of power and instrumentation cables. Ladder trays are often made from fiberglass reinforced plastic (FRP) for non-conductivity, corrosion resistance, and fire retardancy, meeting UL standards and ASTM regulations for flame spread and UV protection (SIESA). **Mesh or Perforated Trays:** Known as Tecnomalla, these trays are lightweight and suitable for low-load applications such as voice, data, network, and sound cabling. They are ideal for indoor environments like office ceilings, IT rooms, and shelters. Materials include electrolytically galvanized steel, hot-dip galvanized steel, and stainless steel (ANSI 304), providing varying levels of corrosion resistance depending on environmental exposure. **Solid-Bottom Trays:** These are used where additional protection from dust, moisture, or mechanical damage is required. They are less common in standard Mexican installations but are available for specialized industrial applications.
