

Online Verification of Relay Protection Logic

Overview

Free relay coordination and protection grading tool for power systems engineers. Visualize Time-Current Characteristic (TCC) curves on a log-log plot with IEC 60255 IDMT curves (SI, VI, EI, LTI), real-time CTI verification, fault sweep animation, and automatic TMS optimization. Supports LV to. Closed loop simulation is the strongest method for proving protective relay settings because it tests timing, logic, and I/O behaviour under dynamic fault conditions. Static secondary injection remains useful for setup checks, but it won't verify full scheme performance under source shifts, breaker. RelaySimTest is a software solution for system-based protection testing with OMICRON test sets. Protective relays are extensively utilized throughout the power system to promptly remove any element from service experiencing a short circuit. We're here to help you discover the best OMICRON solutions for your needs. This facilitates quotations and ordering.
