

Price of Black Fire-Retardant Paint Cable Trays

Article Overview

The price of black fire-retardant paint for cable trays varies widely depending on the type, brand, and application method, typically ranging from \$50 to \$200 per 20 kg bucket or per linear meter coverage.

Types of Fire-Retardant Paints

Intumescent Coatings: These reactive paints expand under heat to form an insulating char layer, slowing heat transfer and protecting cables. They are often factory-applied for consistent thickness and quality, ideal for new builds and hygiene-sensitive environments . **Water-Based Fireproof Paints:** Products like AF Cable Coat are water-based, self-extinguishing paints that release water vapor when exposed to fire, leaving a non-combustible residue. They are suitable for large cable installations in power plants, data centers, and control rooms . **Fire Wrap Systems:** While not a paint, fire wraps are multilayer barriers installed around cable trays. They are more common in retrofit projects and can affect total installed cost due to labor-intensive application .

Factors Affecting Price

- **Coverage Area:** Paint is often sold in buckets (e.g., 20 kg for AF Cable Coat), and the required quantity depends on the linear meters of cable tray and the number of coats.
- **Application Method:** Spray application or factory-applied coatings may increase cost but improve consistency and reduce labor....
