

# Reconfiguring the router for mobile fiber optic connections

## Article Overview

To use your own router with fiber optic internet, connect it to the ONT via Ethernet and configure PPPoE credentials and VLAN settings as required by your ISP.

### Understanding the Setup

Fiber optic internet uses an Optical Network Terminal (ONT) to convert light signals from the fiber line into Ethernet data that your router can use. Unlike traditional DSL or cable, fiber does not use a modem, so your router connects directly to the ONT. Some ISPs provide a combined ONT/router unit, but using a separate router allows for more customization and potentially better performance.

### Steps to Configure Your Router

- 

Confirm ONT Activation: Ensure your ISP has installed and activated the ONT. Without this, your router cannot connect to the internet.

- 

Connect Your Router: Use a high-quality Ethernet cable (CAT6 or better) to connect the ONT to your router's WAN port.

- 

Access Router Settings: Log into your router's admin panel via a web browser, typically using an IP address like 192.168.1.1 ....
