

Size of power distribution box

Article Overview

Power distribution boxes vary widely, with residential wall-mounted units typically ranging from 300×300×150 mm to 600×400×200 mm, while industrial freestanding cabinets can reach 1600–2200 mm in height, 600–1800 mm in width, and 300–600 mm in depth.

Residential Distribution Boxes

For homes, breaker panels or main distribution boards are usually wall-mounted and compact. Common sizes include 300×300×150 mm, 400×300×200 mm, and 600×400×200 mm, accommodating 12 to 42 circuits depending on the panel type . Single-gang boxes are designed for one device, while double-gang or multi-gang boxes can house multiple breakers or switches . Modern residential panels often support 200A or higher to handle electric vehicles and smart home systems .

Commercial and Light Industrial Boxes

In commercial or light industrial settings, wall-mounted or floor-standing enclosures are larger to accommodate more circuits, heavier wiring, and additional equipment like PLCs or relays. Typical freestanding cabinets range from 1600–2200 mm in height, 600–1800 mm in width, and 300–600 mm in depth . These boxes often feature higher IP ratings (IP44–IP67) for protection against dust and moisture .

Factors Affecting Size Selection

- Number of circuits or devices: More circuits require larger enclosures....
