

Supply of Trapezoidal European-style Cable Trays

Article Overview

Trapezoidal European-style cable trays are available in stock from suppliers like Eurotray and Eurostrut, designed for heavy-duty cable management in industrial and commercial installations.

Trapezoidal cable trays, commonly used in European-style installations, are engineered to carry and protect electrical cables safely along planned pathways. These trays are particularly suitable for high-load applications, including low, medium, and high voltage cables, and are often used in data centers, industrial facilities, and food manufacturing plants where cable heating and hygiene are critical (Eurotray, Eurostrut) .

Key Features

- **Material Options:** Typically made from hot-dip galvanized steel, stainless steel, or halogen-free plastics, ensuring durability and compliance with DIN EN 61537 and international standards .
- **Design:** The trapezoidal shape provides enhanced load-bearing capacity and allows for vertical and horizontal installations, making it ideal for complex routing and raised floor applications .
- **Ventilation and Access:** Open tray design promotes airflow, reducing heat buildup, and allows easy access for maintenance or future cable expansion .
- **Accessories:** Complete systems include mounting supports, connection parts, fittings, and grounding components, ensuring safe and compliant installation
