

Tariff Costs CFP2DML

Article Overview

CFP2DML tariff costs include shipping charges, surcharges, customs duties, and local fees, which can be estimated using carrier tariffs and import duty calculators.

Shipping and Carrier Charges

For shipments under CMA CGM, tariff costs are determined by origin, destination, container type, and date. Charges typically include the base freight rate, bunker adjustment factor, security fees, terminal handling charges, and possible peak season surcharges. Demurrage and detention fees may also apply if containers are held beyond the allowed free time at ports or terminals (). CMA CGM provides daily updated tariff publications to ensure transparency and accurate cost planning ().

Local Charges and Inland Transport

In addition to ocean freight, local charges such as port fees, customs clearance, and inland transport from the port to the final destination can significantly affect total costs. These charges vary by country and port, and carriers like CMA CGM and Hapag-Lloyd provide country-specific local charge overviews to help manage these expenses ().

Import Duties and Taxes

Import duties depend on the Harmonized Tariff Schedule (HTS) code of the product, its value, and the country of origin. Tools like the Tariff/Duty Calculator or AI-powered import duty calculators can estimate customs duties, VAT/GST, and total landed cos...
